**Attachments:** Deschutes TMDL 2017 bacteria resubmittal ltr..pdf; Crosswalk 2010 to 2012 list.docx

That's good news about the data! I will be back in the office and free after about 1:30 this Friday. If you still need to chat then, just let me know.

I'm attaching the resubmitted bacteria loads. Unfortunately there were no calculations included – Chris Zell is the best person to ask for questions on these, but I know a little bit, too. In my recollection of conversations with him, the loads apply at the most downstream point for the listing ID(s). I'm also attaching a crosswalk I put together since Ecology updated the listing IDs between the 2015 and 2017 submittals.

Hope this helps!

Hi Miranda,  
No worries! I have a conflict during your break, so we can just catch up later in the week. My one big Q was whether you could provide a copy of the TMDL that included the loads for bacteria. The report Ecology referenced (plus the other ones I quickly found online) only have the concentrations.

And we were able to find I think most of the data (I think). It's not quite as straight-forward as one would hope – some of the station IDs for the continuous data had no hyphens while the station names in the report, etc. had hyphens. But I think we may have a couple of other potential requests that I'll share with you when you are back in the office.  
Thanks, Amy

Hi Amy,

Sorry for responding late. I was at an off-site training, and my laptop was acting up so I couldn't check emails. I will be in training tomorrow too, but could touch base with you on one of our breaks or during my lunch break (likely 12-1).  
Would that be ok?

Hi Miranda,  
Do you have a few minutes to touch base? I'm working on that matrix I mentioned and have just a couple of questions. I'm working from home, so if you send me some times that work for you today, I can give you a call.  
Thanks, Amy
